

Ideation Phase

Empathize & Discover

Date	4 September 2026
Team ID	Individual Project
Student Name	Samudrala Sujana
Project Name	An employee requests installation of licensed software through the Service Catalog
Maximum Marks	4 Marks

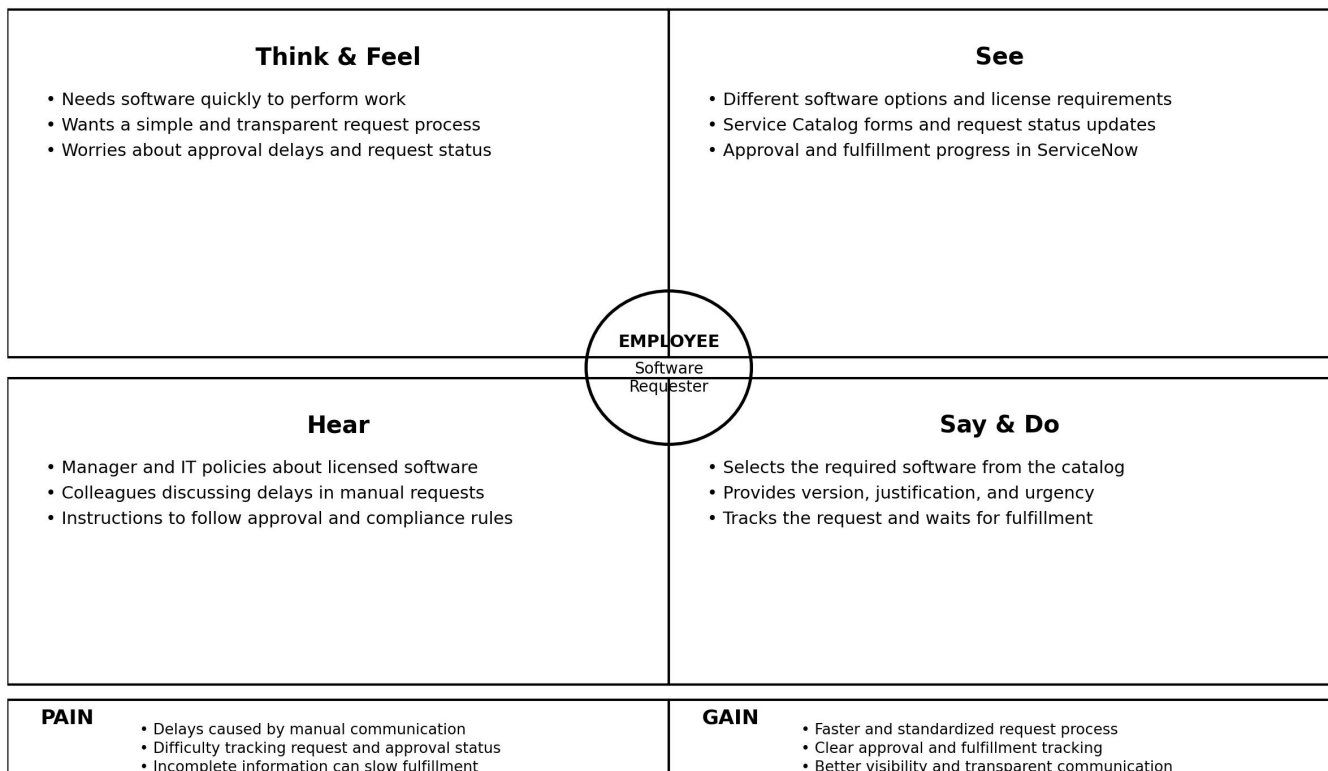

Empathy Map Canvas:

An empathy map helps understand a user's behaviours, attitudes, goals, and challenges. For this project, the primary user is an employee who needs licensed software to perform work efficiently.

Understanding the employee's perspective helps design a ServiceNow solution that simplifies software requests, improves approval visibility, and provides transparent fulfillment tracking.

Empathy Map for the Software Installation Requester

Empathy Map - Employee Requesting Licensed Software Installation

User Persona: Employee / Software Requester

Empathy Area	Project-Specific Understanding
Think & Feel	The employee wants the required software quickly, expects a simple process, and is concerned about approval or fulfillment delays.
Hear	The employee receives information about organizational policies, licensing requirements, and approval procedures.
See	The employee sees the Service Catalog request form, request status, and progress through approval and fulfillment.
Say & Do	The employee selects software, provides the required details, submits the request, and tracks its status.
Pain	Manual requests can cause delays, poor visibility, incomplete information, and uncertainty about request progress.
Gain	A standardized ServiceNow process provides faster requests, better tracking, automated workflow, and transparent communication.

Project Insight

The empathy map shows that the employee needs a simple, reliable, and transparent method for requesting licensed software. The ServiceNow solution addresses these needs through a standardized Service Catalog item, automated approval flow, Catalog Task creation for the Software Support Team, email notification, and centralized request tracking.
