Student Name	Samudrala Sujana
Project Name	An Employee Requests Installation of Licensed Software through the Service Catalog
Maximum Marks	2 Marks

Problem – Solution Fit

Problem–Solution Fit means identifying a real customer problem and designing a solution that directly addresses it. For this project, the problem is the manual and unstructured process of requesting licensed software. The proposed ServiceNow solution provides a centralized Service Catalog request process with automated approvals, catalog task creation, email notification, and request tracking.

Purpose

- Understand the difficulties employees face when requesting licensed software.
- Identify the limitations of manual and email-based software request processes.
- Design a solution that fits employee behaviour and organizational requirements.
- Improve request visibility, approval efficiency, compliance, and fulfillment.
- Provide a standardized and transparent software installation request process.
