

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	6 September 2026
Team ID	Individual Project
Student Name	Samudrala Sujana
Project Name	An Employee Requests Installation of Licensed Software through the Service Catalog
Maximum Marks	4 Marks

Functional Requirements:

The following are the functional requirements of the proposed ServiceNow solution for automating licensed software installation requests.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Service Catalog Request	Provide a Service Catalog item for employees to request installation of licensed software.
FR-2	Request Information Capture	Capture Software Name, Version Required, License Justification, and Urgency through catalog variables.
FR-3	Automated Request Flow	Trigger the Flow Designer workflow automatically when the catalog item is requested.
FR-4	Approval Management	Send the software request for approval before fulfillment.
FR-5	Catalog Task Creation	Create a Catalog Task automatically after approval and assign it to the Software Support Team.
FR-6	Email Notification	Send an email confirmation to the requester when the software installation request is submitted.
FR-7	Request Status Tracking	Allow users and administrators to track the Request, Requested Item (RITM), and Catalog Task status.
FR-8	Software Fulfillment	Enable the support team to process the task and update its state from Open to Work in Progress to Completed.

Non-functional Requirements:

The following non-functional requirements ensure that the solution is reliable, secure, easy to use, and suitable for organizational use.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The Service Catalog form should be simple, clear, and easy for employees to use without technical expertise.
NFR-2	Security	Only authorized ServiceNow users and support personnel should access request and fulfillment information according to their roles.
NFR-3	Reliability	The automated flow should consistently create approvals, tasks, and notifications when valid requests are submitted.
NFR-4	Performance	Request submission and workflow execution should complete within an acceptable response time under normal usage.
NFR-5	Availability	The solution should be available whenever the ServiceNow instance is accessible to authorized users.
NFR-6	Scalability	The workflow should support an increasing number of employees and software installation requests without major redesign.
NFR-7	Maintainability	The catalog item and Flow Designer workflow should be easy to update when approval rules or fulfillment requirements change.
