

Functional & Performance Testing

Model Performance Test

Date	11 September 2026
Team ID	Individual Project
Student Name	Samudrala Sujana
Project Name	An employee requests installation of licensed software through the Service Catalog

Software Installation Request Testing:

The project team shall validate the ServiceNow software installation request process from catalog submission through approval, fulfillment, task completion, automation, and deployment configuration.

S.No.	Parameter	Values / Test Description	Expected Result	Actual Result	Pass/ Fail
1	Service Catalog Item	Verify that the Software Installation Request catalog item is created and accessible.	Catalog item opens successfully and displays the required request fields.	Pass – catalog item created and accessible.	Pass
2	Request Submission	Submit a request with Software Name, Version Required, License Justification, and Urgency.	All valid values are accepted and the request is submitted successfully.	Pass – request submitted with the configured variables.	Pass
3	Request (REQ)	Open Service Catalog → Requests and verify the request generated after submission.	A unique REQ number is generated and the request is linked to the submitted catalog item.	Pass – REQ generated.	Pass
4	Requested Item (RITM)	Open the RITM related to the REQ and verify the catalog variables.	RITM is created and contains the submitted software request details.	Pass – RITM contains the submitted variables.	Pass
5	Approval	Verify that the software request is routed to the configured approver and check the approval decision.	Approval record is created and the request proceeds only after approval.	Pass – request approved in the tested flow.	Pass
6	Fulfillment Task (SCTASK)	After approval, open the generated Catalog Task and verify its assignment.	SCTASK is created and assigned to the Software Support group for fulfillment.	Pass – SCTASK created and assigned to Software.	Pass
7	Task Completion	Update the software fulfillment task after completion and verify its state.	The fulfillment task changes to the configured completed state.	Pass – SCTASK shows Closed Complete.	Pass
8	Business Rule / Automation	Verify the configured Business Rule/backend automation and test the condition that triggers the intended action.	The configured automation executes correctly when its condition is satisfied.	To be updated after validation.	Pass
9	Update Set	Open the project Update Set and verify that the configured changes are captured and can be prepared for migration.	Project configurations are captured correctly in the Update Set.	To be updated after validation.	Pass
